Observation Skills

Question 1: Coffee Shop Problem

Scenario:
You enter a coffee shop and notice that customers are waiting much longer than usual for their orders. The manager asks you to understand the problem before suggesting any solution.

Arrange these actions in the correct order:

- Observe how employees are working.
- Note where delays are happening.
- Talk to customers about their experience.
- Summarize the findings.

Correct Order

1. Observe how employees are working.
2. Note where delays are happening.
3. Talk to customers about their experience.
4. Summarize the findings.

Question 2: College Library

Scenario:
Many students complain that they cannot find available study space in the library.

Arrange the steps.

- Record how students use the seating area.
- Identify peak hours.
- Ask students about their difficulties.
- Report the major observations.

Correct Order

1. Record how students use the seating area.
2. Identify peak hours.
3. Ask students about their difficulties.
4. Report the major observations.

Thinking Skills

Question 3: Event Registration

Scenario:
Only half the expected students registered for a college event.

Arrange the actions.

- Gather data about registrations.
- Identify possible reasons.
- Compare different solutions.
- Select the best solution.

Correct Order

1. Gather data.
2. Identify possible reasons.
3. Compare solutions.
4. Select the best solution.

Question 4: Campus Wi-Fi

Scenario:
Students complain that campus Wi-Fi becomes extremely slow during lunch hours.

Arrange the steps.

- Collect information about when the issue occurs.
- Analyze possible causes.
- Consider different improvements.
- Recommend the most practical fix.

Correct Order

1. Collect information.
2. Analyze causes.
3. Consider improvements.
4. Recommend the best fix.

Building Skills

Question 5: Student Attendance App

Scenario:
Your team is asked to build a simple attendance application for professors.

Arrange the process.

- Understand user requirements.
- Design the application's screens.
- Develop the application.
- Test it with users.

Correct Order

1. Understand requirements.
2. Design.
3. Develop.
4. Test.

Question 6: College Lost-and-Found Website

Scenario:
Students often lose items on campus. Your team is building a website to help them recover their belongings.

Arrange the steps.

- Identify user needs.
- Create a basic prototype.
- Build the website.
- Collect feedback and improve it.

Correct Order

1. Identify user needs.
2. Create prototype.
3. Build website.

4. Collect feedback.
